### ABSTRACT

This development research focuses on designing a web-based application to manage training program submissions for lecturers at Politeknik Negeri Batam. The current system still relies on printed forms and emails, which hampers the submission process and difficulties in reading documents based on interviews with users. This research focuses on designing a web application to automate the current application process., validate file completeness, and facilitate tracking and archiving of training history. The main features to be provided include the submission of courageous training, real-time tracking of submission status, uploading of post-training documents, issuance of assignment letters, and management of training data archives. With this system, the lecturer training application process is expected to become more streamlined and transparent, thereby having a positive impact on the quality of education at Politeknik Negeri Batam.
